by Therese M. Cruciano

reliminary data show that taxpayers filed 114.6 million U.S. individual income tax returns for Tax Year 1993, an increase of 0.8 million returns, or 0.7 percent, from the number filed for 1992. Adjusted gross income less deficit (AGI) increased a modest 2.3 percent, to more than \$3.7 trillion, compared to the 4.8 percent increase between 1991 and 1992. Taxable income also rose a moderate 2.2 percent to over \$2.4 trillion. In contrast, total income tax increased 5.3 percent, from \$476.0 billion for 1992 to \$501.2 billion for 1993. A substantial portion of the increase in income tax was reported by high-income taxpayers, mainly as the result of the new 36 percent and 39.6 percent marginal tax rates first effective for 1993 (31 percent was the highest rate for 1992), as well as the increased alternative minimum tax rates of 26 percent and 28 percent (24 percent was the only rate for 1992). However, taxpayers affected by the new marginal tax rates for 1993 were permitted to defer payment of two-thirds of the tax owed that was in excess of the tax that would have been owed at the previous 31 percent rate. An estimated 640,000 taxpayers elected to use this deferral. While the average tax rate increased 1.6 percentage points for individuals with AGI of \$100,000 or more, the average tax rate for those individuals with AGI under \$100,000 declined 0.1 percentage

During 1993, the consumer price index (CPI-U) grew at an annual rate of 3.0 percent, the same rate of growth as for 1992 [1]. The growth of both aggregate AGI and aggregate salaries and wages was less than the rate of inflation. The moderate growth in AGI reflected modest gains in a number of income items. Salaries and wages, the principal portion of adjusted gross income, grew by 2.8 percent, or one-half the 1992 rate. However, some other items did show significant increases for 1993: net capital gain (less loss) rose 21.4 percent; and partnership and S Corporation net income (less loss) increased 8.8 percent. Still others showed large declines for 1993, including a 19.8-percent decrease in taxable interest, and a 12.4-percent decline in unemployment compensation. The foreign tax credit rose 16.0 percent, while the total earned income credit increased 19.1 percent from 1992.

The comparisons of data for Tax Years 1992 and 1993 in this article are based on the preliminary estimates for both years [2]. A few income and tax items tend to be understated in preliminary estimates; therefore, comparisons based on preliminary estimates for one year and final

Therese M. Cruciano is an economist with the Individual Returns Analysis Section, Jeff Hartzok, Chief.

estimate's from previous years could be misleading. Comparisons based entirely on preliminary estimates reduce the likelihood of misinterpretation of the data, and afford a more accurate representation of year-to-year change. Final statistics for Tax Year 1992 are available in the historical tables at the end of this issue of the *Bulletin*.

Adjusted Gross Income, Taxable Income, and Total Income Tax

AGI grew at a slightly higher annual rate than taxable income, 2.3 percent for 1993 (Figure A) versus 2.2 percent for 1992. Total income tax, however, rose by 5.3 percent, reflecting increases primarily due to the new 36 percent and 39.6 percent marginal tax rates for high-income returns. The alternative minimum tax (AMT), on the other hand, rose 53.9 percent. Most of this increase apparently resulted from the increase in the basic alternative minimum tax rate from 24 percent to 26 percent and the imposition of a new 28 percent tax on alternative minimum taxable income in excess of the first \$175,000 (\$87,500 if married filing separately).

Average AGI reported on 1993 individual income tax returns was \$32,489, representing a growth of \$494, or 1.5 percent, over the amount for 1992; in contrast, average

Income tax increased 5.3 percent to \$501.2 billion. A substantial portion of the increase was due to high-income taxpayers subject to the new 36 percent and 39.6 percent marginal tax rates.

AGI for 1992 grew \$1,788 to \$31,995, or a 5.9 percent increase from 1991. Average taxable income for 1993 equaled \$26,961, up \$594 (or 2.3 percent) from the 1992 amount of \$26,367, which showed a growth of \$1,779 (or 7.2 percent)

over the amount for 1991. In addition, average total income tax for 1993 grew \$319 (or 5.8 percent), to \$5,796 per taxable return (i.e., a return showing an amount for total income tax liability), in contrast to the \$439 increase (or 8.7 percent) to \$5,477 per taxable return for 1992 [3].

The average tax rate for 1993 (i.e., total income tax divided by AGI reported on *all* returns, taxable and nontaxable) was 13.5 percent, 0.4 percentage points more than for 1992 (Figure B). However, all income size classes with AGI less than \$100,000 had average tax rates slightly less for 1993 than for 1992, while the average tax rate for returns with AGI between \$100,000 and \$200,000 increased only 0.1 percent. Therefore, the higher overall tax rate for 1993 was essentially used by the individuals in the AGI size classes of \$200,000 or more. The principal reasons for the higher average tax rates at the upper end of the income scale were the addition of two new

marginal tax rates, the increase in the first AMT rate, and the introduction of a second alternative minimum tax rate for 1993. The lower average tax rates in the six lowest AGI size classes (Figures B and C) were mainly the result of the inflation indexing of the size of the standard deduction, size of the deduction for personal exemptions, and the width of the tax rate brackets. The inflation indexing caused each of these items to increase by about 3.0 percent, while the aggregate income for returns with AGI under \$100,000 grew at a rate of 1.2 percent.

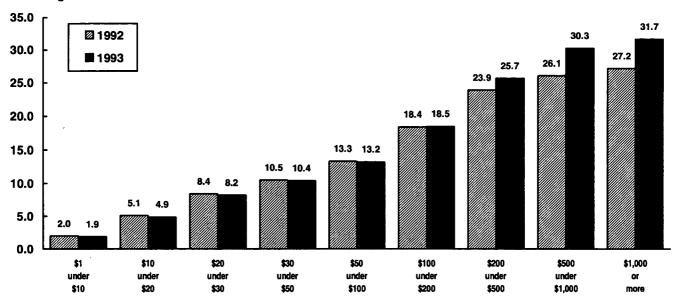

Selected Sources of Income

The largest component of AGI, salaries and wages, grew by \$77.8 billion, or 2.8 percent for 1993 (Figure D). Business or profession net income (less loss) rose 2.4 percent, after increasing 8.7 percent for 1992. Both salaries and wages and business or profession net income (less loss) grew by less than the 3.0 percent rate of inflation for 1993. The growth rates of these two items were also notably less than the 5.4 percent growth rate for the Gross Domestic Product [4].

1993 (preliminary)	17,563	195,502	3.4

¹ Comparison cannot be made between 1987 and 1988 because in 1987 pensions, annuties, and taxable IRA distributions were all reported on one line on Form 1040.

Corporation net income (less loss) rose 8.8 percent, although this net income tends to be revised considerably in the final estimates for a year (see *Data Sources and Limitations*). Net capital gain (less loss) increased sharply to \$133.4 billion, a change of 21.4 percent from

1992. Unemployment compensation dropped 12.4 percent to \$27.7 billion, a level more consistent with 1991, reflecting the decline in the number of unemployed persons from 7.4 percent in 1992 to 6.8 percent in 1993 [5]. The number of returns showing income from unemployment compensation benefits for 1993 also decreased, falling 6.8 percent to 9.7 million.

Partially as a result of the continuing decline in interest rates, taxable interest received declined by 19.8 percent, to \$127.1 billion, its lowest level since 1980. Tax Year 1993 was the third consecutive year for which taxable interest decreased. Excluded from Figure D are "statutory adjustments," which are subtracted in the computation of AGI (see Statutory Adjustments).

"Total positive income" (TPI) differs from AGI in that it includes only the positive income line items from individual tax returns. TPI is particularly useful when examining percentage changes in income items which can have either positive or negative results, i.e., a gain or loss, such as estate and trust income, rent and royalty income, and farm income, that are relatively similar in size. This is because the netting effect tends to camouflage the separate gains and losses which can be quite substantial [6]. For 1993, TPI grew 2.3 percent, to reach \$3.9 trillion (Figures F and G) [7].

Figure G

Sources of Total Positive Income and Net Losses in Adjusted Gross Income, Tax Year 1993

NOTE: Detail may not add to totals because of rounding.

Losses

In contrast to total positive income, total negative income includes only the negative income line items from individual tax returns. Total negative income, i.e., net losses, included in AGI increased for 1993 to \$138.4 billion, an increase of 1.7 percent (Figures G and H). "Other net losses," representing the total amount (including positive amounts) reported on the "all other" residual income line of Form 1040 (excepting the foreign-earned income exclusion), were responsible for 25.3 percent of the total and showed the largest dollar amount change, increasing by \$2.9 billion. The "net operating loss carryforward" accounted for 92.3 percent or \$31.9 billion of "other net losses." Business or profession net loss, which fell for 1992, rose 6.8 percent to \$19.6 billion [8]. However, losses declined 5.6 percent for taxpayers participating in partnerships and S Corporations, which accounted for the 21.4 percent total net losses (Figures G and H).

Statutory Adjustments

Statutory adjustments to total income increased 3.3 percent for 1993 (Figure I). The deduction for one-half of self-employment tax was the largest of all statutory adjustments, representing 32.4 percent of the total; it increased by 3.4 percent. Deductible payments to Individual Retirement Arrangements (IRA's), despite the continued downward trend which began with 1986, accounted for 23.9 percent of all statutory adjustments. Although the self-employed health insurance deduction

rose 57.5 percent for 1993, this increase is overstated because the 1992 data do not include amounts reported on amended returns that were filed as a result of the retroactive reinstatement of the provision allowing a deduction of 25 percent of health insurance payments which had expired on July 1, 1992.

Deductions

The aggregate amount of all standard deductions claimed, i.e., the basic standard deduction plus the additional standard deduction for age or blindness, rose 4.1 percent for 1993, from \$368.0 billion to \$383.2 billion (Figure J). Total deductions, the sum of the standard deductions and total itemized deductions (after limitation), equaled \$863.6 billion, an increase of 2.4 percent. (See *Definitions and Changes in Law* for a definition of the itemized deduction limitation.)

The number of returns claiming a standard deduction increased slightly for 1993, accounting for 70.7 percent of all returns filed and 44.4 percent of total deductions. The 1993 average standard deduction equaled \$4,730, up \$144 from the average for 1992. The increase was largely due to inflation indexing of the standard deduction amounts.

Itemized deductions were claimed on 28.5 percent of all returns filed and represented 55.6 percent of total deductions. The average total for itemized deductions (after limitation) equaled \$14,693, compared to \$14,605 for 1992. (The remaining 0.8 percent of the returns claimed neither standard nor itemized deductions because there was no AGI on these returns.)

Gambling loss and other miscellaneous deductions	739	2,379	733	2,718	14.2
Itemized deductions in excess of limitation	3,242	12,507	3,289	12,408	-0.8
Total itemized deductions after limitation	32,527	475.043	32,694	480,355	1.1
Total standard deduction	80,257	368,041	81,014	383,231	4.1
Total deductions (after itemized deduction limitation)	112,784	843,084	113,708	863,586	2.4

¹ Returns with no adjusted gross income are not included in the deduction counts. For this reason, the sum of the number of returns with total itemized deductions and the number of returns with total standard deduction is less than the total number of returns for all filers.

Total itemized deductions (before limitation) increased 1.1 percent for 1993. Interest paid, once again, constituted the largest portion (39.6 percent) of the total, with home mortgage interest accounting for 95.2 percent. The remaining portion of interest paid was divided between "investment interest" and deductible points paid on a mortgage. The home mortgage interest deduction decreased 4.3 percent from the 1992 amount, coinciding with the lower interest rates for 1993.

The AGI threshold for the limitation of itemized deductions was increased to \$108,450 for 1993. Total itemized deductions disallowed higher-income taxpayers by this limitation amounted to \$12.4 billion, a decline of 0.8 percent compared to 1992.

Tax Credits

Total tax credits increased by 7.1 percent for 1993, from \$7.4 billion to \$7.9 billion (Figure K). Four credits

² Amount shown for total itemized deductions is after limitations. Therefore, the sum of the component deductions does not add to the totals.

³ Includes investment interest and deductible mortgage "points," not shown separately.

increased: the child care credit, the earned income credit (in total, as well as the nonrefundable portion), the foreign tax credit, and the general business credit. The foreign tax credit increased 16.0 percent for 1993, at least partly because high-income taxpayers who could claim most of this credit could offset more of their foreign taxes against the increased U.S. tax resulting from the higher marginal U.S. tax rates.

The portion of the earned income credit (EIC) used to offset income tax before credits rose 11.5 percent for 1993 after dropping slightly (1.2 percent) for 1992 (Figure K). However, the largest segment of the EIC was the refundable portion, which was treated as a refund and paid directly to taxpayers who had no tax against which to apply the credit, or whose EIC exceeded income tax (and other taxes, such as the self-employment tax). The refundable portion of the EIC amounted to \$12.1 billion for 1993, up 20.5 percent from the \$10.0 billion reported for 1992. Total EIC, including the refundable portion, equaled \$15.6 billion, a 19.1 percent increase over 1992.

Summary

Adjusted gross income and total positive income grew at slower rates for 1993 than they had for 1992; their growth was-less than the rate of inflation. During this same period, income tax increased, yet the average tax rate decreased for most returns, even though the overall average tax rate increased. Only taxpayers reporting AGI of \$100,000 or more experienced an increase in average tax rates for 1993. The addition of the new marginal tax rates of 36 percent and 39.6 percent, impacting only high-income taxpayers, significantly contributed to the 5.3

percent increase in total income tax, which rose from \$476.0 billion to \$501.2 billion. The total earned income credit (including both the refundable portion and the amounts used to offset tax) grew by 19.1 percent over 1992.

Unemployment compensation reversed the recent trend, falling 12.4 percent, while net capital gain (less loss) continued to increase 21.4 percent. Taxable interest declined 19.8 percent to the lowest level since 1980. Itemized deductions increased by 1.1 percent to \$480.4 billion, and taxable income grew 2.2 percent, reaching almost \$2.5 trillion.

Definitions and Changes in Law

In general, the definitions used in this article are the same as those in *Statistics of Income--1992*, *Individual Income Tax Returns*. The following is a partial list of tax law and Internal Revenue Service administrative changes that had a major bearing on the 1993 preliminary data presented in this article.

Alternative Minimum Tax. — For Tax Year 1993, the basic alternative minimum tax rate was increased from 24 to 26 percent. Alternative minimum taxable income in excess of the first \$175,000 (\$87,500 if married filing separately) was taxed at a new rate of 28 percent. This increase in tax rates was partially offset by an increase in the alternative minimum tax exemption, which rose from \$40,000 to \$45,000 for married persons filing jointly and qualifying widow(er)s, from \$30,000 to \$33,750 for single persons and heads of household, and from \$20,000 to \$22,500 for married persons filing separately.

Credit for prior-year minimum tax	59	261	56	217	-16.9	

^{*}Includes credits not shown separately.

²Represents portion of earned income credit used to offset income tax before credits. Additional earned income credit amounts were used to offset other taxes (\$1.0 billion for 1992 compared to \$1.2 billion for 1993), and some amounts were either refundable or paid directly to the taxpayer (\$10.0 billion for 1992 compared to \$12.1 billion for 1993).

- the new 36 percent and 39.6 percent marginal tax rates being applied retroactively, taxpayers affected by the new rates were permitted the option of deferring payment on two-thirds of the tax owed that was in excess of the tax that would have been owed at the 31 percent rate. Taxpayers electing the deferment option were required to file Form 8841, Deferral of Additional 1993 Taxes, with their 1993 tax return. Half of the deferral taxes were to be paid by April 17, 1995 and the remaining half by April 15, 1996.
- Earned Income Credit. If a taxpayer's "earned income" and adjusted gross income for 1993 were both less than \$23,050, and a qualifying child lived with him or her, the taxpayer may have been allowed to claim the earned income credit. (The income eligibility level, which was \$22,370 for 1992, was adjusted to reflect inflation.)

The basic credit for 1993 could have been as much as \$1,434 for one qualifying child, and as much as \$1,511 for two or more qualifying children, compared to \$1,324 and \$1,384, respectively, for 1992. The maximum amount of the health insurance credit was \$465, an increase of \$14 over 1992. The maximum amount of the extra credit for a child born in 1993 was \$388, compared to \$376 for 1992.

- Exemption Amount. Indexing for inflation allowed a taxpayer to claim a \$2,350 deduction for each exemption to which he or she was entitled for 1993, an increase over the \$2,300 allowed for 1992. The threshold for the limitation of exemption amounts was also indexed for inflation, from \$105,250 to \$108,450 for single filers; \$157,900 to \$162,700 for married persons filing jointly and qualifying widow(er)s; \$131,550 to \$135,600 for heads of household; and \$78,950 to \$81,350 for married persons filing separately. After inflation adjustment, the phaseout of the deduction for exemptions was completed at AGI levels above \$230,950 for single filers; \$285,200 for married persons filing jointly and qualifying widow(er)s; \$258,100 for heads of household; and \$142,600 for married persons filing separately. Above these levels, no deduction for exemptions was allowed.
- Itemized Deductions. If a taxpayer's AGI was greater than \$108,450 (\$54,225 if married filing separately), some types of his or her itemized

- deductions may have been limited; this threshold was increased from \$105,250 (\$52,625) for 1992, as a result of inflation indexing. The limitation did not apply to deductions for medical and dental expenses, investment interest expenses, casualty or theft losses, and gambling losses; all other deductions were subject to the limitation. To arrive at allowable itemized deductions, total itemized deductions were reduced by the smaller of: (a) 80 percent of the deductions that were subject to the limitation, or (b) 3 percent of AGI in excess of the limitation threshold
- Self-employed Health Insurance Deduction. In 1987 and subsequent years, self-employed persons, or owners of more than 2 percent of the outstanding stock of an S Corporation, could deduct, when calculating AGI, up to 25 percent of the amount paid for health insurance for themselves and their families. The deduction was disallowed for any month in 1993 in which the self-employed individual was eligible to participate in any subsidized health plan maintained by an employer of the individual or their spouse. The deduction expired on July 1, 1992; therefore, only the amounts paid prior to that date could be deducted on 1992 returns. The Omnibus Budget Reconciliation Act of 1993 extended the provision retroactively for the period July 1, 1992, through December 31, 1993. Taxpayers had to file an amended return if they wished to take advantage of the deduction, but amended returns were not used for the statistics.
- Self-employment Tax. The ceilings on taxable "self-employment income" were raised for 1993, to \$57,600 for self-employment tax, and \$135,000 for medicare tax. The limits were \$55,000 and \$130,200, respectively, for 1992. (Self-employment taxes and medicare taxes are reflected in the statistics for "total tax liability.")
- Standard Deduction. The standard deduction increased for 1993 as a result of inflation indexing. For single filers, the standard deduction rose from \$3,600 to \$3,700; for married persons filing jointly or qualifying widow(er)s, from \$6,000 to \$6,200; for married persons filing separately, from \$3,000 to \$3,100; and for heads of household, from \$5,250 to \$5,450.
- Tax Brackets. Two new tax brackets applicable to high-income taxpayers were created for 1993 [9].

The new 36 percent tax rate applied to taxable income in excess of \$115,000 for single filers; \$140,000 for joint filers or qualifying widow(er)s; \$70,000 for married persons filing separately; and \$127,500 for heads of households and equal to or below \$250,000 for single filers, joint filers, or qualifying widow(er)s and heads of households and \$125,000 for married persons filing separately. The new 39.6 percent tax rate applied to taxable income in excess of the upper boundary (stated above) for the 36 percent tax bracket.

To counterbalance the effects of inflation, the existing tax brackets were widened. The 15 percent bracket applied to taxable income equal to or below \$22,100 for single filers; \$36,900 for joint filers or qualifying widow(er)s; \$18,450 for married persons filing separately; and \$29,600 for heads of household. The 28 percent tax bracket applied to taxable income in excess of the 15 percent bracket ceiling and equal to or below \$53,500 for single filers; \$89,150 for joint filers or qualifying widow(er)s; \$44,575 for married persons filing separately; and \$76,400 for heads of household. The 31 percent tax rate applied to taxable income in excess of the 28 percent bracket ceiling and equal to or below \$115,000 for single filers; \$140,000 for joint filers or qualifying widow(er)s; \$70,000 for married persons filing separately; and \$127,500 for heads of house-

Data Sources and Limitations

These preliminary statistics are based on a sample of individual income tax returns (Forms 1040, 1040A, and 1040EZ; including Form 1040PC and electronically-filed returns) filed during Calendar Year 1994. Returns in the sample were stratified based on: (a) the larger of positive income or negative income; (b) the size of business and farm receipts; (c) the presence or absence of specific forms or schedules; and (d) the usefulness of returns for tax modelling purposes [10]. Returns were then selected at rates ranging from 0.014 percent to 100 percent. The preliminary 1993 data are based on a sample of 88,191 returns and an estimated final population of 115,616,004 returns. The corresponding sample and population for the preliminary 1992 data were 88,023 and 115,102,585 returns, respectively.

The data presented here are estimates based on a sample of returns filed, and are, therefore, subject to sampling error. To properly use the statistical data provided, the magnitude of the potential sampling error must be known; coefficients of variation (CV's) are used to measure that magnitude.

Approximate CV's for the number of returns and money amounts for selected income items are presented (Figure L). These approximate CV's shown are intended only as a general indication of the reliability of the data. The reliability of estimates based on samples, and the use of coefficients of variation for evaluating the precision of estimates based on samples, are discussed in the appendix to this issue of the *Bulletin*.

otal income tax	475,964	476,239	275	0.1
Alternative minimum tax	1,138	1,357	219	19.2

While the preliminary estimates are intended to represent a full year of taxpayer reporting, they are actually based on returns processed for tax administration purposes, in the case of 1993 returns, between January and late September of 1994. In general, returns processed during the remainder of each year tend to have somewhat different characteristics compared to the returns processed earlier. These characteristics include disproportionately large amounts of investment income and alternative minimum tax, for example.

All comparisons between 1993 and 1992 are based on preliminary estimates for each year. A comparison of 1992 preliminary and final data is provided (Figure M). Certain items, such as AGI and salaries and wages, which are reported on most returns, changed little. In contrast, other items, including the alternative minimum tax, partnership and S Corporation net losses, and "other" income less loss tend to be understated, to varying degrees, in all preliminary estimates.

Notes and References

[1] Economic Report of the President, 1995, p. 341. The consumer price index (CPI-U) represents annual averages of monthly figures and reflects buying patterns of all urban consumers:

1993 CPI-U = 144.5;

1992 CPI-U = 140.3;

1991 CPI-U = 136.2.

[2] "Preliminary estimates" differ from the "early tax estimates" published for 1993 in the Fall 1994 edition

of the *Bulletin*. The preliminary estimates in this article represent estimated totals expected for the full tax year, based on returns processed by the Internal Revenue Service through September 1994. The early tax estimates represent data only for returns filed through April 30.

- [3] Average (or mean) taxable income is defined as the amount of taxable income divided by the number of taxable returns. Taxable returns are defined as returns with "total income tax" (the sum of income tax after credits and the alternative minimum tax) present. Average total income tax is defined as the amount of total income tax divided by the number of taxable returns.
- [4] Economic Report of the President, 1995, p. 275.
- [5] Economic Report of the President, 1995, p. 320.
- [6] For example, farm net income decreased 7.4 percent, from \$10.5 billion to \$9.7 billion. Farm net loss rose by 4.9 percent, from \$12.2 billion to \$12.8 billion. The net income (less loss), however, increased 81.2 percent. The small percentage changes in the positive and negative portions led to a large percentage change in the combined total because the respective portions were similar in size and, thus, the net income (less loss) was small in absolute amount.
- [7] For purposes of this article, total positive income is a compilation of all income items on individual income tax returns (Forms 1040, 1040A, 1040EZ, 1040PC, and electronically-filed returns) for which a positive

- amount was reported by the taxpayer. The Form 1040 income tax return entry for Schedule E, Supplemental Income and Loss, was separated into the following components: rent and royalty net income, partnership and S Corporation net income, and estate and trust net income. When any of these components was positive on a return, the corresponding income (rather than the netted total amount from Schedule E) was included in the statistics for total positive income.
- [8] Detailed information regarding nonfarm sole proprietorships will be included in the Fall 1995 issue of the *Bulletin*.

- [9] U.S. Congress, Omnibus Budget Reconciliation Act of 1993 (H.R. 2264, 103rd Congress; Public Law 103-66), August 10, 1993.
- [10] Returns in the sample were stratified based on the presence or absence of one or more of the following forms or schedules: Form 2555, Foreign Earned Income; Form 1116, Computation of Foreign Tax Credit; Schedule C, Profit (or Loss) from Business or Profession; Schedule F, Farm Income and Expenses; and Form 4835, Farm Rental Income (or Loss).

Not included in adjusted gross income.

Total income tax represents income tax after credits (including the earned income credit), plus alternative minimum tax.

^{*}Total tax liability represents income tax after credits (including the earned income credit), plus alternative minimum tax, plus any other additional taxes, e.g., self-employment tax and penalty tax on Individual Retirement Arrangements (IRA's).

*Estimate should be used with caution because of the small number of sample returns on which it is based.

NOTE: Detail may not add to totals because of rounding.
